RESEARCH FIELD AND SCIENTIFIC INTERESTS

My primary field of research interest is Machine Learning and Statistical Learning applied to the biomedical field. I am interested in studying and developing statistical models, machine learning algorithms and data mining methods, both from a methodological and applied perspective.

During these years of research, I specialized my interest in non-parametric and ensemble models, developed especially in the context of survival analysis. I also had the opportunity to apply my methodological skills in the context of social sciences (education and socio-economic topics).

I am interested on mathematical and statistical models for social sciences, focused on health data.

Member of Società Italiana di Statistica (SIS), Institute of Mathematical Statistics (IMS) and Royal Statistical Society (RSS).
