Job-related skills	My research covers a wide range of topics, covering different fields of geophysics and engineering seismology. My interests lie with signal processing (with special regards to ambient vibration seismology and the analysis of diffuse wave-field), surface-wave analysis, solution of inverse problems, ground motion modelling and engineering seismic site-response evaluation. I am presently working on issues related to the probabilistic seismic hazard assessment and earthquake impact evaluation. The current target of my research aims to bridge the gap between applied geophysics and engineering seismology.
