

FRANCESCA TONELLI, PhD

Researcher at University of Pavia, Department of Molecular Medicine

0382 987233

francesca.tonelli@unipv.it

Researcher (RTDA)

2021-present: Temporary contract as researcher (PON React EU)

Project: Perfluorinated compounds impact on bone cells homeostasis in a zebrafish model for dominant osteogenesis imperfecta.

Supervisor: Prof. Antonella Forlino

University: University of Pavia

Post doctoral experience

2018-present: Post-Doctoral fellowship

Project: Bone specific delivery of the chemical chaperone 4-phenylbutyrate for osteogenesis imperfecta treatment

Supervisor: Prof. Antonella Forlino

University: University of Pavia

Education

2014-2017: PhD in Biomedical Sciences

Thesis: OI zebrafish models and their use to develop new pharmacological treatments

University of Pavia

2012-2014: Master degree in biomedical and pharmaceutical Biotechnology

Thesis: Zebrafish Chihuahua: a valid model of osteogenesis imperfecta for the study of new therapeutic approaches

University of Pavia

2009-2012: Bachelor's Degree in biomedical and pharmaceutical Biotechnology

Thesis: Study of expression of collagen receptor DDR1 in human megakaryocytes

2004-2009: High school graduation

School: Liceo scientifico "Galileo Galilei"

Honors and Awards

New Investigator Award at ICCBH 2019, Salzburg, Austria, 22-25 June 2019

Winner of the "OIF Michael Geisman Fellowship 2019"

Research interests and technical skills

Research activity as PhD student in Biomedical Sciences and post doctoral fellow. My work was focused on the study of molecular defects in macromolecules of skeletal tissue in human diseases. The aim of my project was to generate osteogenesis imperfecta zebrafish models using CRISPR/Cas9 technique and use these models for pharmacological treatments.

Teaching activity:

2020-2021: Contract professor of biochemistry at the University of Pavia.

Co-supervisor of master and PhD thesis students.

Skills:

- Molecular biology: DNA and RNA extraction and purification from cells and tissues, DNA electrophoresis analysis by PCR and RT-qPCR, generation of zebrafish models using the CRISPR-Cas9 strategy, subcloning isolation of plasmidic DNA, *in vitro* transcription.
- Cellular biology: primary cell culture techniques.
- Biochemistry: spectrophotometric techniques, protein extraction and purification from cells and tissues, SDS-PAGE and Western blot.
- Histology: sample preparation and histological staining, optical and fluorescence microscopy, wholemount immunohistochemistry and *in situ* hybridization on zebrafish.
- Animal models: pharmacological treatments using zebrafish, management of zebrafish facility, *in vitro* fertilization and microinjection in zebrafish embryos.

List of publications and patents

- Cell differentiation and matrix organization are differentially affected during bone formation in osteogenesis imperfecta zebrafish models with different genetic defects impacting collagen type I structure Daponte, V., Tonelli, F., Masiero, C., Syx, D., Exbrayat-Héritier, C., Biggiogera, M., Willaert, A., Rossi, A., Coucke, P.J., Ruggiero, F., Forlino, A. (2023) Matrix Biology, 121, pp. 105-126.
- Zebrafish Tric-b is required for skeletal development and bone cells differentiation. Tonelli F, Leoni L, Daponte V, Gioia R, Cotti S, Fiedler IAK, Larianova D, Willaert A, Coucke PJ, Villani S, Busse B, Besio R, Rossi A, Witten PE and Forlino A (2023) Front. Endocrinol. 14:1002914.
- Structure, evolution and expression of zebrafish cartilage oligomeric matrix protein (COMP, TSP5). CRISPR-Cas mutants show a dominant phenotype in myosepta. Forte-Gomez HF, Gioia R, Tonelli F, Kobbe B, Koch P, Bloch W, Paulsson M, Zaucke F, Forlino A and Wagener R (2022) Front. Endocrinol. 13:1000662.
